

**December 04, 2025**

**Addendum No. 02**

**File Reference Number: RFT 2025 090**

**Title: Purchase of Two (2) Forklifts**

**RE: Clarifications/Questions**

---

**QUESTIONS/CLARIFICATIONS:**

**Item 1: Appendix B – RFT Particulars – Specifications – Item No. 02: One (1) New Diesel Powered Pneumatic Tire Forklift**

For this Forklift, main concern is with the Width (63" Max) along with the rated Capacity and Lift Height. For Example –

- We can offer a Forklift that has the Capacity, 4WD and Mast Height but will be approximately 10" Wider
- Alternatively, we can meet the width specification, 4WD and Mast Height but the Capacity will not be met.

Essentially the question is, if there was a priority level for one of the specifications. What is the most important for ONTC?

- Rated Capacity (8,000lb @ 24" Load Centre to n15')
- Overall Width being Narrower than 63"
- Lift Height (252")

**Answer:** Proponents are expected to meet the specification requirements as closely as possible with the products they supply. Proponents who are unable to meet certain specific requirements but can satisfy the general specifications will still receive points.

However, the two specifications listed below are the most critical for ONTC -

- Rated Capacity (8,000lb @ 24" Load Centre to n15')
- Overall Width being Narrower than 63"

This Addendum hereby forms part of the RFT.
